Before You Dive In…

What is ABC’s Need-to-Know Criteria?
This ABC Wastewater Treatment Operator Class I Need-to-Know Criteria was developed to assist operators in understanding the content that will be covered in ABC’s Standardized Wastewater Treatment Operator Class I exam. A methodical and comprehensive international investigation was conducted to determine the most significant job tasks performed by wastewater treatment operators. The content covered on the exam represents the job tasks identified through this research as essential operator competencies, and is not limited to the practices of your system/facility. The following pages organize these job tasks into Content Areas and identify the amount of the test devoted to each area.

Is this Need-to-Know Criteria relevant to MY exam?
ABC offers a variety of standardized and customized exam services. This document is reflective only of the ABC Standardized Wastewater Treatment Operator Class I exam; older editions of the standardized exam and various customized exams are also administered by various certification programs. Please contact your certifying authority to determine whether they have implemented this exam for your program.

Pre-Test Questions
Your exam may include up to 10 extra questions that have not been used on previous versions of the exam. These are known as “pre-test” questions and allow ABC to gather valuable data about the new questions before they are included in future tests. Pre-test questions are unidentified and scattered throughout the exam so you will answer them with the same care in which you address scored questions. The pre-test questions are not included in your final score.

Exam Preparation Resources
Visit www.abccert.org to access the formula/conversion table administered with this exam, a list of approved references, information on purchasing study guides available from partner organizations, and more.

The Wastewater Treatment Operator Class I exam will test you on essential job tasks. These job tasks have been categorized into the Content Areas detailed in the following pages. The table below summarizes the areas that are included on the exam, the number of test questions in each of these areas, and the complexity of the test questions in each area.

Just as wastewater treatment operator job duties vary in their complexity, so will the questions you are asked on the exam. Some will be more simple and routine, whereas others will be more complex, or cognitively demanding. The following three levels are used to describe the complexity of the questions you will encounter on this exam:

- **Recall** – tasks at this level typically require the simple recall or recognition of specific facts, concepts, processes, or procedures, with little to no problem-solving involved. You may be asked to identify, illustrate, recall, and/or recognize specific information.

- **Application** – tasks at this level will involve some basic problem solving, calculations, or the interpretation and application of data. You may be asked to calculate, categorize, classify, compare, differentiate, explain, specify, translate, and/or apply knowledge.

- **Analysis** – tasks at this level may involve higher level problem solving, evaluation, or the fitting together of a variety of elements into a meaningful whole; they will usually require many steps in the thought process. You may be asked to analyze, evaluate, formulate, generalize, judge, predict, and/or use inductive or deductive reasoning to arrive at a solution.

*Your exam may contain up to 10 extra unscored pre-test questions (see Before You Dive In for more details).*
1. Follow laboratory Standard Operating Procedures (SOPs)
2. Collect samples for the following:
   a. Bacteriological analyses
   b. Biological analyses (e.g., BOD, CBOD)
   c. Chemical analyses (e.g., COD, nutrients, metals)
   d. Physical analyses (e.g., pH, temperature, DO, settleable solids)
3. Conduct the following:
   a. Physical analyses
   b. Process control laboratory testing
4. Interpret data from the following:
   a. Bacteriological analyses
   b. Biological analyses (e.g., BOD, CBOD)
   c. Chemical analyses (e.g., COD, nutrients, metals)
   d. Physical analyses (e.g., pH, temperature, DO, settleable solids)
1. Calibrate meters (e.g., flow, pressure sensors)
2. Follow safety rules and guidelines when working with chemical equipment
3. Follow safety rules and guidelines when working with mechanical equipment
4. Monitor flowmeters
5. Monitor telemetry systems
6. Perform basic electrical troubleshooting
7. Perform preventative maintenance on equipment
8. Inspect the following equipment:
   a. Aeration basins
   b. Aeration systems (e.g., blowers, surface aerators, diffusers)
   c. Aerobic digesters
   d. Air compressors
   e. Analyzers (e.g., DO, pH, H2S, ORP)
   f. Bar screens
   g. Chemical feed systems (e.g., polymer, ferric)
   h. Chlorination systems
   i. Clarifiers / sedimentation basins
   j. Gates and valves
   k. Generators
   l. Grit removal processes
   m. Hand tools
   n. Heavy equipment
   o. Hoists and cranes
   p. Instrumentation (e.g., flow, pressure, telemetry)
   q. Mixers
   r. Motors
   s. Ponds / lagoons
   t. Power tools
   u. Pumps - centrifugal
   v. Pumps - positive displacement
   w. SCADA systems
9. Maintain the following equipment:
   a. Aeration basins
   b. Aeration systems (e.g., blowers, surface aerators, diffusers)
   c. Air compressors
   d. Analyzers (e.g., DO, pH, H2S, ORP)
   e. Bar screens
   f. Chlorination systems
   g. Clarifiers / sedimentation basins
   h. Dechlorination systems
   i. Gates and valves
   j. Generators
   k. Hand tools
   l. Heavy equipment
   m. Instrumentation (e.g., flow, pressure, telemetry)
   n. Mixers
   o. Motors
   p. Ponds / lagoons
   q. Power tools
   r. Pumps - centrifugal
   s. Pumps - positive displacement
   t. Suspended growth (e.g., activated sludge, MBR, SBR)
1. Analyze data to evaluate and adjust equipment
2. Check filters for proper operation
3. Conduct wastewater pipe repairs
4. Follow safety rules and guidelines when working with chemical equipment
5. Follow safety rules and guidelines when working with mechanical equipment
6. Follow Standard Operating Procedures (SOPs)
7. Monitor lift stations to ensure equipment is operating properly
8. Monitor motor control center
9. Operate the following:
   a. Aeration basins
   b. Aeration systems (e.g., blowers, surface aerators, diffusors)
   c. Aerobic digesters
   d. Air compressors
   e. Analyzers (e.g., DO, pH, H2S, ORP)
   f. Bar screens
   g. Chemical feed systems (e.g., polymer, ferric)
   h. Chlorination systems
   i. Clarifiers / sedimentation basins
   j. Conveyors
   k. Dechlorination systems
   l. Gates and valves
   m. Generators
   n. Hand tools
   o. Heavy equipment
   p. Hoists and cranes
   q. Instrumentation (e.g., flow, pressure, telemetry)
   r. Mixers
   s. Motors
   t. Ponds / lagoons
   u. Power tools
   v. Pumps - centrifugal
   w. Pumps - positive displacement
   x. SCADA systems
1. Analyze laboratory data to evaluate and adjust processes
2. Follow industry safety rules and guidelines applicable to treatment processes
3. Implement changes as indicated by laboratory results
4. Operate chemical feed systems (e.g., polymer, ferric)
5. Operate SCADA systems
6. Operate the preliminary treatment processes (e.g., screening, grit, flow equalization)
7. Operate the primary clarification / sedimentation processes
8. Operate the following secondary treatment processes:
   a. Pond / lagoon systems
   b. Secondary clarification / sedimentation processes
   c. Extended aeration processes (e.g., package, SBR, oxidation ditch)
9. Operate the following disinfection treatment processes:
   a. Chlorination processes
   b. Dechlorination processes
1. Adhere to established safety procedures (e.g., lock-out / tag-out, confined space, hazard communication, fall protection)
2. Complete operation reports
3. Complete required regulatory reports
4. Conduct routine security checks
5. Ensure compliance with all applicable regulations
6. Generate maintenance reports (e.g., daily, monthly, annual)
7. Implement spill notification policy
8. Inspect SCBA equipment
9. Receive chemical deliveries and store
10. Schedule routine activities (e.g., maintenance, operations)
11. Update Standard Operating Procedures (SOPs)
Supporting Knowledge

The chart below outlines several types of knowledge that support the performance of the job tasks on which you may be tested. These types of knowledge are rated at one of three levels to represent the extent of knowledge needed to perform the job tasks assigned to each Content Area:

- **Basic** – A fundamental or lower level of knowledge is required. Operators performing tasks requiring this level of knowledge will be able to do so with some training; this level of knowledge may also be acquired and developed through job experience. Such tasks may be routine, utilizing established procedures, and have a low level of complexity. Not having this level of knowledge will have minimal impact or significance on the performance of the tasks listed in the Content Area, or on public safety and welfare.

- **Intermediate** – A level of knowledge beyond the basic level is required. Operators performing tasks requiring this level of knowledge will be able to do so with training beyond that of the basic level. The operator will not only be able to apply required fundamental concepts, but will be able to understand and discuss the application and implications of changes to processes, policies, and procedures within the Content Area. Not having this level of knowledge will have a significant impact on the performance of the job and on public safety and welfare.

- **Advanced** – A very high level of knowledge/job expertise is required and the operator will be functioning at an expert level. The operator can apply all fundamental, as well as highly developed or complex concepts, and will be able to design, review, and evaluate processes, policies, and procedures within the Content Area. Not having this level of knowledge will have a serious impact on the performance of the job and will be very harmful to public safety and welfare.
